50 Years
Handle-free Kitchens

1960
2010
SieMatic

The latest from the inventors of the handle-free kitchen.

Which kitchens will make history in the future?

It is not just furniture, clocks, and cars that have earned a place in the history of design. Kitchens have done so as well. When the very first SieMatic was presented in 1960, it was considered revolutionary. As the SieMatic 6006, it became the most popular kitchen of its time and remained up to date for generations.

With the 6006, SieMatic for the first time brought many things to the kitchen which over time became the general standard – from a high-precision measuring system with guaranteed fit to adjustment mechanisms for the variable utilization of the interior space; from dust seal stripping for doors and drawers to the design itself: the SieMatic 6006 was the world's first handle-free kitchen, making it the prototype for many others. But who could develop a successful idea more ambitiously than its inventor?

In 1960 we presented the first handle-free kitchen in the world.
Now we have reinvented it for you: SieMatic S2.

Every new SieMatic developed in the past five decades set standards in design, function, and perfection. Consistently dispensing with handles and knobs is also one of the SieMatic innovations, one that became the prototype for many. In 2008 it was the SieMatic S1, whose “integrated” design, great functionality, and exclusive detail solutions provided new impetus, also earning it 18 awards.

Today, in the year of the 50th anniversary of our brand, we are again writing a new chapter in the history of the “handle-free kitchen” – with the SieMatic S2. In an age in which many things are becoming increasingly similar, it offers something that is of special value: character and personality.

The minimalist language of form, the elegance of the interior accessories, the high level of functionality: some things about the SieMatic S2 recall the award-winning design of the SieMatic S1, and yet, it has a look all its own. It results from the details developed exclusively for the SieMatic S2, such as the vertical recess channel with dust seal, the open pullouts, the multimedia elements, and the color and material compositions typical of the SieMatic S2 collection: the contrast of matt and glossy elements within a single world of color produces a discreet, modern interior design full of sophisticated effects. Another new element in the interior design of the kitchen is provided by the paneled wall cabinets with a depth of 25 cm: they offer more planning flexibility along with additional storage space.

Like an oasis in the big city, this SieMatic S2 exerts its effect through consistent minimalism and a light mix of materials: matt lacquer and brilliant white glass along with light shades of stone and wood. The paneled 25-cm-deep wall cabinets and push-to-open hardware flank the cooking area and provide additional storage space. The effect of the variations in depth accentuate the living room character of this plan. The limestone countertop in "Maljat crème" combined with the light planks of the oak flooring also create a warm and homey effect.

Easy to grip: the ergonomic, optimally shaped 3.5-cm recessed channel, typical of the S2 design. They optically underscore the desired lines; whether horizontal or vertical.

The faucet fixture with its intelligent "head control" is one of the exclusive developments from SieMatic. All operating functions are located in the movable head element; the desired temperature can be preset easily. So you can always keep one hand free.

The vertical recess channels of the tall cabinets are a key element in the overall graphic look of the SieMatic S2. One highlight is the new, tall multimedia cabinet. As desired, it can integrate everything that turns your kitchen into living space: the high-end audio/video system, which was developed together with experts from T+A, as well as the SieMaticGrid, a user interface developed exclusively for SieMatic, which offers Internet access and numerous other individually configurable options. The screen integrated in the front can be pulled out and swiveled easily. Concealed behind it is useful storage space for technical utensils. The control strip above the screen can be used to control many functions – at the touch of your fingertips or by remote control.

Oven and steamer or microwave installed side by side at eye level: both convenient and attractive. Starting now, good entertainment will also be joining this lineup. The SieMatic tall multimedia cabinet with integrated screen makes it possible.

The multimedia cabinet offers not only many technical functions, such as iPod dock, CD, DVD, TV, and radio with the highest video and sound quality, it also keeps things orderly. For instance, the "parking space" for the remote control and air mouse.

Still a kitchen or already a living room? The language of form of the SieMatic S2 has the aesthetics of modern living room furniture. This and the contemporary design of high-quality electrical appliances provide for elegant integration of the kitchen and its wide variety of functions into the living area.

Prototype for many: we have been continuously optimizing the handle-free kitchen since its invention in 1960. Today the look and feel of SieMatic recessed grips has attained a degree of perfection that is unparalleled. The 3.5-cm-deep recessed grips of the SieMatic S2 provide an optimal grip for opening pullouts and doors: On base cabinets, the 1-cm look of the countertops and side panels provides an attractive contrast to the depth of the recessed channel.

Great effect even in a small space.

The color "truffle gray," which SieMatic first brought to the kitchen with the S1, thus starting a trend, emphasizes the modern living room furniture character of the handle-free kitchen and is therefore an ideal fit with the proportions of the SieMatic S2.

Minimalistic design coupled with maximum functionality enable the SieMatic S2 to meet the highest demands of individuality – regardless of the available floor space or budget. The principle of SieMatic CompactDesign makes it possible to transform even the smallest kitchen into an original SieMatic S2.

Above all for small kitchens, every centimeter is precious. With the new SieMatic interior system, you can create more storage space and more order in an elegant manner – from sorting cutlery to separating waste. You can see more starting on page 20.

1,950 colors for one kitchen. Why?

In designing the fronts of your SieMatic S2, you can choose from PUR lacquer in high-gloss or matt, high-quality laminate, and beautiful wood veneer. If you decide on paint, you can select from beautiful shades, such as lotus white, magnolia white, greige, truffle gray, basalt gray, sterling gray, amaranth green, saffron yellow, sienna red, terra brown, and black. But that's not all. In addition to the attractive color palette of the S2 program, you also have another range of design choices at your disposal: the 1,950 colors of SieMatic ManufakturDesign. So you can give your kitchen a unique finish, because each color, even white, is available here in the finest range of shades.

SieMatic ManufakturDesign stands for the greatest possible individuality in design. It offers 1,950 paint colors from the Natural Color System (NCS), an internationally recognized color system from Scandinavia, which is highly valued for interior design by architects and interior decorators alike. Thanks to its finely harmonized shades of color, each one in matt or high-gloss, it is an outstanding choice for kitchen design with a particularly warm and elegant ambience. And for people with their own very personal points of view.

Sophisticated metallic colors are very popular today in many areas. Now you can even use them to enhance your kitchen. The color "aluminium" adds lightness to cabinet elements, "gold-bronze" adds a soft sheen to the glass doors of paneled wall cabinets. This effect is created by applying metallic paint to the back sides of the glass doors. However, they are also available in white and black. As extravagant as these surfaces seem, they are uncomplicated and easy to care for.

Today's built-in appliances from well-known brand manufacturers are usually found with stainless steel or aluminum surfaces. This look can be combined perfectly with the metallic shades of the SieMatic S2 program, and their functions can be integrated unobtrusively into the planning.

The upper wall cabinet doors also open very easily thanks to their ideally formed metal strip handles. All metal strip handles are equipped with the new, exclusive SieMatic dust seals. The newly developed paneled wall cabinets with a depth of 25 cm offer different functions and thus new options for interior design: they can be used to structure the space, to cover walls, for color contrast, to loosen up the design, and to underscore the homey atmosphere. Furthermore, as additional cabinet elements, they also provide more storage space. Their handle-free doors can be opened with a slight pressure.

Minimalist aesthetics call for maximum precision in workmanship. How much love of detail is contained in the SieMatic S2 is shown, for example, in the design of the aluminum side panels: the perfect craftsmanship of the beveling creates reflecting lines that underscore the metallic character of the fronts.

Unusual and homey: the newly developed, open base cabinet shelves, which continue the dark wood color of the countertop are as decorative as they are practical. The shelves can be pulled out for convenient access.

The combination of matt, aluminum-colored fronts, shining stainless steel countertop, and paneled wall cabinets with glass doors in a warm shade of "gold-bronze" is as attractive as it is extraordinary. The effect is accentuated by the dark, smokey oak of the 8-cm-thick countertop, which simultaneously acts as the "frame" for the metallic-colored elements.

Never before have pullouts offered so many advantages.

The anti-slip strips of the oak inserts of the SieMatic GripDeck keep even heavy objects securely in place.

Many functions and options that are now common were first brought to the kitchen by SieMatic. For instance, the easy-care, joint-free plastic inserts for drawers and the all-round dust seal. A SieMatic has always had more ideas per square centimeter. But never as many as today: the completely newly developed system of SieMatic interior accessories offers solutions that are completely new, both optically and functionally. Light, glazed oak, fine porcelain, and high-quality aluminum create an elegant and delicate mood in soft shades of gray. The numerous inserts of fine oak can be combined individually and fit together perfectly. The versatile functional elements add many variations to the design options available to you behind the doors. These are the inner values possessed only by a SieMatic.

In the new SieMatic interior accessories system, high-quality porcelain is a theme with many variations: with their lids with glass insets, the decorative porcelain spice jars look good even on the dining table. The porcelain handles on the foil roll holders facilitate opening. The porcelain knife rack holds knives of different sizes. The porcelain lids of the containers and wooden boxes can be used in a variety of ways and can be re-labeled again and again in pencil.

These beautifully formed practical elements were designed in collaboration with the renowned German porcelain manufacturer Kahla.

Attractive and handy: the cutlery insert with fold-up handles can easily be carried into the dining room or onto the terrace.

Serving tray and chopping board in one: bamboo was selected for the cutting surface on the back side of the tray because it is a particularly hard wood and will not influence the taste of foods.

Zimtstangen

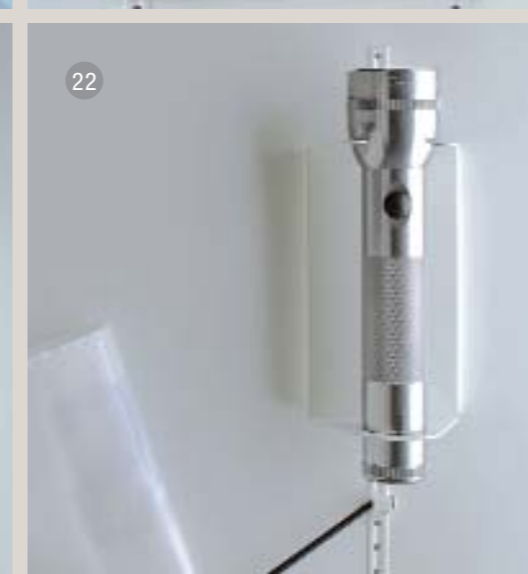

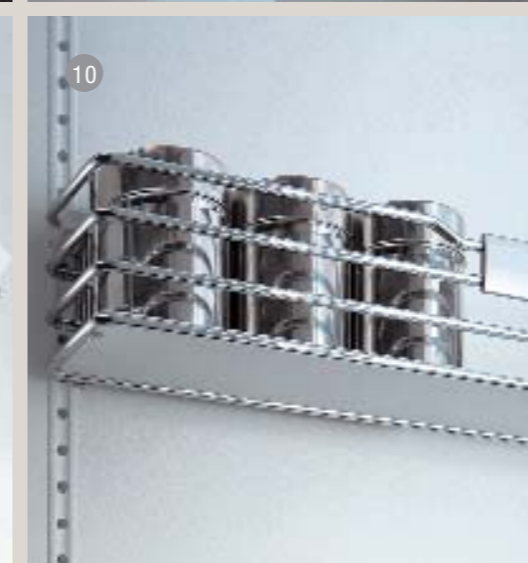

With SieMatic you get more from your kitchen: up to 30% more storage space.

Nowhere is space as valuable as in kitchen cabinets. Yet this is exactly where many precious centimeters are usually given away. As a rule, conventional cabinet elements offer only two to three shelves at just a few locations. And the resulting storage space rarely has the optimal size for the things to be stored there. No wonder that many people already find themselves wishing for more storage space shortly after purchasing a kitchen. Unless they chose a SieMatic. Because it has more: MultiMatic, a highly flexible interior system that can be put together, changed, and added to just the way you need it. Anytime, with no problem – and you can do it yourself. The patented SieMatic multifunction track system provides for a nearly continuous range of adjustment for the furnishing elements. This facilitates individual arrangement of the interior space and practical distribution of the objects. And it gives you more space: up to 30% more.

Like every SieMatic, the S2 also holds one of the best ideas since the discovery of storage space: the MultiMatic interior system. It is very valuable, not only in small kitchens. It makes every cabinet a specialist for your own personal sense of order. Which has won it many international design awards.

1 Bottle shelf 2 Stemmed glass holder 3 Three-tier pullout for silverware 4 Adjustable shelves
 5 Towel holder 6 Spacer bars 7 Casing, spice rack and bowl 8 Container set 9 Filter holder
 10 Spice rack 11 Hook for towels, bags, etc. 12 Clips and elastic straps 13 Roll-out for
